Midland Exploration Inc. (MD-V)

Midland/Barrick commence sonic drilling program on the Patris Gold Property, Abitibi, Québec

On March 26, 2024, Midland announced the start of a sonic drilling campaign on the Patris Gold Property, currently 100% owned by Midland and located ~30 km to the NE from the city of Rouyn-Noranda in Québec. Recall on May 15, 2023 Midland had reported the signing of a definitive option agreement ('Transaction") with a wholly-owned indirect subsidiary of Barrick Gold Corporation for its Patris Property (see: https://www.linkedin.com/posts/eric-lemieux-9468715_quebec-abitibi-gold-activity-7049055685476544512-Tpr7?utm_source=share&utm_medium=member_desktop). The Patris Gold Property, totalling 11,700 ha (299 claims), is currently owned by Midland and located ~35 km NE of the town of Rouyn-Noranda and less than 10 km NW of the prolific Doyon/Westwood-Bousquet-La Ronde gold mining camp.

Sonic Drilling: A total of ~4,000 m of sonic drilling is planned in ~115 drill holes to characterize geochemical dispersion trains in the glacial till overlain by lacustrine clays. The sonic drilling campaign (http://www.sonicdrilling.com/) is currently underway with 2 drill rigs and a total of 40 holes have already been completed. Over the next few weeks, ~60 new holes shall be completed in the eastern part of the Patris Property in the Kéwagama Group. The work is scheduled to be completed in the first week of April 2024. The characterization of the glacial dispersion trails in the till should help vector in gold targets and compliment the 3D structural analysis.

The Patris Property offers excellent gold potential as it covers the Manneville Fault over more than 8 km and the La Pause Fault over more than 10 km, both recognized as subsidiary faults to the well-known Destor-Porcupine Fault Zone. The Patris Property also covers more than 5 km of the fault contact between the sediments of the Kéwagama Group and the mafic and

ultramafic volcanics of the Malartic Group. Several historical gold showings are found near this contact such as the Gadoury showing which returned 6.3 g/t Au over 1m and the McDermott showing which returned 8.6 g/t Au over 1.2 m.

Option Agreement: Pursuant to the Transaction, Barrick has the right to acquire up to a 75% interest in the Patris Property in consideration for cash payments totaling $1,017,500 and exploration work totaling $16,575,000, over an 8-year period. Barrick is the operator of the work carried out under the Transaction.
